

INSTRUMENTATION STUDY CENTRE

A Society of training for students to grow interest in the field of Electronics and Instrumentation
50B, Central Road, Jadavpur, Kolkata – 700 032, Ph: 9831762415, web : www.instrumentationstudy.org

From the Instrumentation Study Centre

Respected Sir/Madam,

On behalf of the 'Instrumentation Study Centre' I would like to inform you that we have organized a small training centre in the field of electronics and instrumentation for the needy students. You may kindly visit our website www.instrumentationstudy.org . Its objective, specialty, outcome, mode of operation and source of fund etc. have been mentioned in our site. We have tried to clarify in detail as far as possible.

Main purpose of our centre is to encourage the young students and also to develop general awareness in the field of technical science. Considering the vastness of the work our approach may be taken as a starting endeavour in this direction. We have also designed our programme in such a way that different persons from different sectors may participate and also extend the present activity in any aspect of this field according to their choices. We hope that such activities have some underlying meaning which may flourish in due course of time as various issues are interrelated with it.

It will be highly appreciated if you kindly make some comments about our centre. Your feedback will be helpful for us to organize the centre in a better way.

It will also be appreciated if you kindly forward this link to some other persons who may be interested in our activity. You may enjoy 'Your Involvement' menu of our site.

We are expecting to hear from you after your visit to our website. Gradually we will try to incorporate your suggestions/feedback to improve our activity.

With best regards,

Yours sincerely,

Pallab Das (on behalf of the President, www.nbmanik.in)
